

Strategy Assignment: Lumora HealthTech

Student Assignment Brief

Course Module: Winning Ambition

Case Study: Lumora HealthTech

Assignment Context

Lumora HealthTech is a mid-sized B2B digital health company based in Germany, specializing in diagnostic software for outpatient clinics and diagnostic labs across the DACH region (Germany, Austria, Switzerland). Its flagship product is a Diagnostic Decision Support System (DDSS) used in lab diagnostics to analyze patient data (symptoms, lab results, medical history) and suggest likely diagnoses or next steps, helping reduce time-to-diagnosis and errors.

After early growth, Lumora's momentum has plateaued in recent years. Market saturation in core segments and the rise of specialized competitors (e.g. niche AI tools focusing on single diagnostics modalities like radiology) have pressured margins. Lumora's leadership has been reassessing the company's strategy – exploring **where to play** (new markets and segments), refining **how to win** (value proposition enhancements) and defining **how to play** (operating model) – to reignite growth. With these analyses in pipelin, the executive team realizes that clarifying the company's overarching **Winning Ambition** is critical for guiding the next strategic phase.

Current Identity Check: Lumora's leadership and culture have traditionally emphasized **precision, reliability, and compliance** in diagnostics. The company was founded with a mission of *"empowering diagnostic professionals with accurate, trusted tools to improve patient outcomes."* Core values often cited internally include *quality, integrity, and partnership with healthcare providers*. However, as Lumora has grown, its **purpose and values** have not been formally revisited, and newer employees feel the company's innovative spirit is modest. Notably, Lumora lacks a bold **vision statement** – beyond a general desire to be a "leading diagnostics software provider" in its region. There's a sense that the company's ambition could be sharper and more inspiring. The previous strategic plan (five years ago) set financial growth targets that Lumora nearly achieved before growth levelled off. Leadership acknowledges that the company's **North Star** – its Winning Ambition – needs redefining to navigate upcoming industry shifts.

Industry Foresight (2025–2030): The next 5–10 years will bring transformative changes to Lumora's operating environment in health diagnostics:

- **AI-Powered Diagnostics:** By 2030, artificial intelligence will be deeply integrated into diagnostics. From imaging analysis to pattern recognition in lab results, AI will enable earlier and more accurate detection of diseases. Diagnostic software vendors must balance AI's capabilities with clinicians' need for transparency and trust in the results.
- **Digital Transformation & Integration:** Healthcare providers demand seamless integration of diagnostic tools with electronic health records (EHRs) and hospital information systems. Cloudbased solutions and interoperable platforms will become the norm. Clients will favor partners who can ensure data flows securely across systems, enabling real-time insights and remote access to diagnostic tools.
- **Regulatory Evolution:** Regulators in the EU and beyond are introducing stricter frameworks for digital health and AI. Compliance requirements for data privacy (e.g. GDPR), AI transparency, and validation of clinical software will rise. Companies must invest in meeting medical device software regulations and obtaining certifications, which can be a competitive advantage if done early.
- **Patient-Centric Care Trends:** Healthcare is shifting toward patient-centric and preventative care. Diagnostics is extending beyond the lab – with point-of-care tests, at-home diagnostic devices, and wearable health trackers generating data. Providers and patients expect faster turnaround and more actionable insights from diagnostics.

Lumora's end-users (labs and clinics) are under pressure to deliver not just accurate results, but to integrate those results into holistic patient care quickly. This trend means Lumora may need to help labs serve the needs of more empowered patients and coordinate with other care facets.

- **Competitive Landscape:** Tech giants and agile startups are entering the healthcare diagnostics space, blurring traditional boundaries. Big data platforms, cloud providers, and AI-focused firms are offering diagnostic decision support or analytics. To stand out, Lumora will need a compelling purpose and vision that resonates in this evolving ecosystem – for example, emphasizing **innovation**, **customer-centric solutions**, and demonstrated improvements in health outcomes. The coming years will reward companies that can adapt culturally and strategically to these changes.

In this context, Lumora's executives have tasked you with reimagining the company's **Winning Ambition** to ensure the organization is guided by a clear and inspiring strategic purpose as it moves into the future.

Your Task

You are a Strategy Advisor working with Lumora HealthTech's executive team. Your assignment is to **simulate a strategic decision-making exercise** focused on Lumora's "Winning Ambition." This exercise is divided into two parts:

Part 1 – Diagnosing Lumora's Current Winning Ambition: Analyze Lumora's **implied Purpose, Values, and Vision** based on the case information. What core purpose and values seem to drive Lumora today? What vision (explicit or implicit) does the company currently have? Identify any gaps, inconsistencies, or misalignments in these elements. *(Note: You do not need to assess "Level of Ambition" for the current state – assume past quantitative goals are no longer relevant.)*

Part 2 – Designing Lumora's Winning Ambition for the Next 5 Years: Propose a refreshed set of ambition elements for Lumora's next strategic phase (looking about five years ahead): - **Core Purpose (Mission):** A clear, enduring statement of Lumora's fundamental purpose – why the company exists beyond just making money. This may be a revised or reaffirmed mission based on the diagnosis in Part 1. - **Core Values:** A set of guiding principles or cultural tenets (typically 3–5 values) that Lumora should preserve or evolve. These should reflect what aspects of the culture to keep and what new behaviours or priorities to encourage, given the strategic challenges ahead. - **Vision:** Define a compelling vision for Lumora's future (5 years and beyond). This should include a **BHAG (Big Hairy Audacious Goal)** – a bold qualitative or quantitative goal for 5 years out and beyond – and a **vivid description** of what Lumora will look like once this goal is achieved. Describe the future state in concrete terms (market position, reputation, capabilities, impact on customers/patients, etc.). - **Level of Ambition:** Establish measurable targets that align with the vision. Propose specific 5-year targets across key dimensions – **Financial**, **Customer**, **Internal Process**, and **Learning & Growth** (think of a balanced scorecard): for example, revenue or market share goals (financial), customer acquisition or satisfaction targets (customer), operational or innovation improvements (internal process), and people or capacity-building goals (learning & growth). Ensure these metrics collectively quantify what "winning" means for Lumora by 5 years from now.

When designing the Winning Ambition, ensure **internal coherence** (the Purpose, Values, Vision, and Level of Ambition should logically reinforce each other) and alignment with the provided **industry foresight scenario**. In other words, your proposed Purpose and Values should set the tone for the Vision; the Vision should be made tangible through the Level of Ambition metrics; and all elements should respond to the opportunities and challenges in Lumora's future environment. Aim for an ambition that is **aspirational yet credible**, motivating the organization to stretch itself while remaining grounded in Lumora's context.

Use **only the information in this case** to inform your analysis and proposals – no outside research is needed. The case is designed to provide sufficient data. Be specific and concise in your answers, focusing on strategic insight and clarity.

Assignment Instructions

Part 1: Diagnose Current Winning Ambition

1. **Current Purpose, Values, Vision:** Identify Lumora HealthTech's implied **Core Purpose**, **Core Values**, and **Vision** based on the case description. Describe each of these elements as you perceive them in the company's current state. (What does Lumora currently see as its mission? What values are emphasized? What vision – if any – has it been pursuing?)
2. **Gaps and Misalignments:** Critically evaluate these current ambition elements. Are there gaps (e.g., missing or unclear elements) or inconsistencies between what Lumora says and what it does? For example, is the stated purpose too generic or not shared widely? Do any cultural values conflict with the strategic needs? Is the vision lacking or not aligned with market realities? Identify **key issues** that need to be addressed as Lumora revisits its Winning Ambition.

Part 2: Design Next-Phase Winning Ambition (5-Year Horizon)

3. **Core Purpose & Values for the Next 5 Years:** Propose a refined **Core Purpose (Mission statement)** for Lumora that will guide the company forward. Also, recommend **3–5 Core Values** that Lumora should uphold. These should encompass both continuity (important aspects of Lumora's existing culture that should be preserved) and change (new values or emphasis needed to succeed in the future context). Provide a brief rationale for your choices.
4. **Vision – BHAG and Vivid Description:** Articulate Lumora's **Vision** for approximately five years in the future. Formulate a **BHAG** – a Big Hairy Audacious Goal – that is clear and bold (e.g. a market position, impact, or performance goal for 5 years out and beyond). Accompany this with a **vivid description**: a paragraph describing what it will look and feel like when Lumora achieves that BHAG. This description should paint a concrete picture of Lumora's future (consider its products, customers, reputation, scale, and contribution to healthcare).
5. **Level of Ambition – Quantitative 5-Year Targets:** Define a set of measurable targets that underpin the vision. Include at least one ambitious yet realistic metric for each of the four dimensions:
 - **Financial** (e.g. five-year revenue target, profitability, market share or valuation goal)
 - **Customer** (e.g. number of clinics/hospitals served, customer satisfaction/NPS, customer retention or growth in user base)
 - **Internal Process** (e.g. product innovation cycle time, platform performance or quality measures, operational efficiency improvements, compliance achievements)
 - **Learning & Growth** (e.g. employee engagement or retention rates, talent development targets, R&D investment, intellectual property or partnerships developed)

For each target, you may state the current baseline (if known or assume it) and the goal for five years ahead. Ensure these targets align with the Vision and collectively indicate the level of success Lumora aspires to.

6. **Coherence & Alignment Check:** Finally, briefly explain how your proposed Purpose, Values, Vision, and Level of Ambition **fit together** as a cohesive Winning Ambition. Verify that they are consistent with each other (no element contradicts another) and that they address the trends and challenges in the **foresight scenario**. The goal is to show that Lumora's new Winning Ambition not only reflects internal ideals but also positions the company to “win” in the evolving HealthTech landscape.

Expected output: You may structure your answers by the numbered steps above for clarity. The entire assignment should take about **1 hour** to complete, and you are expected to work **individually**. Be as concrete as possible, especially in Part 2 – your recommendations will serve as the guiding vision for Lumora, so they should be actionable and inspiring. Good luck!

Grading Rubric

Section (Step)	Criteria	Points
Step 1: Current Purpose, Values, Vision	Correct identification of Lumora’s implied mission, core values, and vision (as per case information). Clarity and succinctness in describing these elements.	15 pts
Step 2: Gaps and Misalignments	Insight in diagnosing issues: Are key gaps, misalignments, or inconsistencies identified? Depth of reasoning on why these elements are lacking or not coherent.	15 pts
Step 3: New Purpose & Values	Quality of the proposed mission statement (clear, inspirational, relevant) and chosen core values (appropriate and strategic). Rationale shows understanding of which cultural aspects to preserve vs. change.	20 pts
Step 4: Vision (BHAG & Description)	Ambition and clarity of the BHAG (bold yet credible). Creativity and vividness of the future description. Alignment of vision with Lumora’s context and industry trends.	20 pts
Step 5: Level of Ambition (Targets)	Specificity and relevance of chosen metrics in all four dimensions. Targets are coherent with the vision (not too timid or unrealistic). Shows understanding of what success looks like in measurable terms.	20 pts
Step 6: Coherence & Alignment	Overall coherence of the Winning Ambition elements. The purpose, values, vision, and metrics reinforce each other and address the future scenario. Clear explanation of alignment with industry foresight.	10 pts
Total		100 pts

Appendix: Key Case Information (for reference while working on the assignment)

- **Lumora’s Current Mission (implied):** *“Empowering diagnostic professionals with accurate, trusted tools to improve patient outcomes.”* (This phrase has been used in Lumora’s marketing, reflecting a focus on accuracy and trust. It serves as an unofficial mission statement, though it hasn’t been formally updated in years.)
- **Core Values (current culture highlights):** Lumora’s culture emphasizes **Quality** (precise, errorfree results), **Integrity** (ethical behavior, data compliance), and **Partnership** (close collaboration with labs/clinics). Employees take pride in being known as a “trusted lab partner.” However, values like **Innovation** or **Agility** are not strongly evident – Lumora tends to be cautious, which some newer team members feel slows modernization.
- **Current Vision (implicit):** Lumora does not have a crisply articulated long-term vision. Historically, leadership aimed to be *“the leading diagnostic software provider in DACH”*. The company achieved a strong position in Germany/Austria lab markets, but this vision now feels narrow and not forward-looking enough (especially as technology and markets evolve). There is no bold public “vision 2030” statement guiding the company today.
- **Previous Goals:** Five years ago, Lumora set a goal to **double its revenue** in 5 years by expanding within its core markets – it achieved ~70% of that target as growth stalled. Customerwise, it aimed to maintain a >90% retention rate (it achieved ~88%) and to enter one new adjacent segment (which it did, with mixed results).

These past ambitions were modest and internally focused, and they lacked emphasis on innovation or broader impact.

- **Leadership Perspective:**

- *CEO*: “We need a clear definition of success. We talk about being the best, but we haven’t defined what **winning** means for us now.” (Acknowledges the lack of a current inspiring ambition.)
- *CTO*: “Our DNA is reliability in diagnostics. As we innovate, we must not lose that trust factor.” (Highlights importance of existing strengths in any future vision.)
- *Head of Product*: “I’d love for us to set a big vision – like truly AI-driven diagnostics or expanding access – something that gets people excited and gives us a target to rally around.” (Desire for a more inspiring vision.)
- *HR Director*: “Our people believe in Lumora’s purpose to help patients through better diagnostics. But they also want to see us more boldly embrace new tech and ideas – otherwise we risk losing talent to startups with bigger dreams.” (Internal culture needs a spark of ambition to retain talent.)

- **Industry Outlook (Highlights, 5–10 years):**

- AI will assist in ~30% or more of all diagnostic decisions (estimate), requiring companies like Lumora to integrate AI or risk obsolescence.
 - Healthcare providers expect software partners to ensure **interoperability** (plug-and-play with EHRs, lab instruments, national health data networks). This could become a standard requirement.
 - Regulatory bodies (e.g., EU MDR, upcoming AI regulations) will likely mandate transparency in AI algorithms and stricter validation for diagnostic software, raising the bar for market entry and trust.
 - Patient-centric care means labs and diagnostic tools must deliver faster results and actionable insights, as patients and clinicians demand more immediate, personalized information. Companies enabling **remote diagnostics** or seamless patient data sharing will have an edge.
 - New entrants (big tech cloud providers offering healthcare analytics, AI startups, even large lab equipment manufacturers extending into software) are changing competitive dynamics. Standing still is not an option; continuous innovation and a strong brand trust will be key to survival and leadership.
-

Instructor Guide – Winning Ambition Assignment (Lumora HealthTech)

This section provides guidance on expected answers, a sample solution outline, and evaluation criteria for each part of the assignment. It is meant to help instructors assess student submissions and provide feedback. The student's task was to diagnose Lumora's current Winning Ambition (Purpose, Values, Vision) and design a new Winning Ambition for the next 5 years (Purpose, Values, Vision, Level of Ambition), ensuring coherence and alignment with the case's future scenario.

Grading Rubric (for reference)

Section (Step)	Criteria and Expectations	Points
1. Current Purpose, Values, Vision	Identification & Clarity: Student correctly identifies Lumora's implied core purpose (mission), key cultural values, and any stated or implicit vision from the case. The answer should reflect case details (e.g., focus on accuracy and trust in diagnostics for purpose; values like quality/integrity; a limited or missing formal vision).	15 pts
2. Gaps and Misalignments	Analytical Insight: Student pinpoints relevant gaps or inconsistencies. Good answers likely note that the mission/purpose is generic or not future-oriented, values might not include innovation or adaptability needed for the future, and that there's an absence of a bold vision. They might also mention misalignment like saying "innovative" but not actually pursuing innovation (if applicable). The rationale behind why these are issues should be sound.	15 pts
3. New Purpose & Values	Quality of Proposals: The proposed mission should be inspiring, specific to Lumora's role in healthcare, and forward-looking (beyond "make money" or generic statements). Core values should be 3–5 meaningful terms or phrases; expect a mix of preserving important current values (e.g. quality, integrity) and adding new ones (e.g. innovation, customer-centricity, agility). The student should provide reasoning or an explanation tying these values to Lumora's strategic needs.	20 pts
4. Vision (BHAG & Description)	Ambition & Imagination: The BHAG should be appropriately bold (e.g. a significant market or impact milestone in 5 years) yet not utterly unattainable. The vivid description should complement the BHAG, painting a concrete picture – strong responses will mention Lumora's future market position, reputation (e.g. "trusted AI diagnostics leader"), capabilities (perhaps an AI-driven platform), and impact on patients or healthcare. It should clearly tie to trends (e.g. AI integration, patient-centric care). Creativity and coherence with the mission/values are rewarded.	20 pts

Section (Step)	Criteria and Expectations	Points
5. Level of Ambition (Targets)	Specificity & Alignment: Each of the four categories (financial, customer, internal, learning/growth) should have at least one clear metric with a target number or percentage and ideally a baseline. The metrics should collectively reflect the vision. For instance, if the BHAG is about market leadership, a financial or customer metric might be market share or number of clients. Internal metrics might address innovation (e.g. % revenue from new products) if the vision calls for innovation. We expect ambitious targets (e.g. significant growth or improvement, not incremental) that are feasible.	20 pts
6. Coherence & Scenario Alignment	Big Picture Integration: The student should demonstrate that the pieces fit together: e.g., the mission and values set the stage for the vision, the vision is quantified by the targets. Importantly, the answer should connect back to industry foresight – e.g., if AI and integration are key trends, the ambition likely includes being a leader in AI-driven diagnostics, values like innovation, and targets related to new tech or partnerships. Full credit if the answer explicitly references scenario elements to justify the ambition’s direction.	10 pts
Total		100

Instructor Notes & Sample Solution

Below is a sample outline of a strong answer for each part of the assignment. **Note:** This is not the only correct solution – students may craft different but equally valid Winning Ambitions for Lumora, as long as they are well-justified and coherent. Use these notes to check that students’ logic and content make sense relative to the case.

Step 1: Current Purpose, Values, Vision (Diagnosis)

Sample Answer Highlights:

- **Core Purpose (Current Mission):** Lumora’s implied purpose is *to improve patient diagnostic outcomes by equipping labs with accurate and reliable decision-support tools*. This is evidenced by their focus on high accuracy and trust (“diagnostics you can trust”) in the case. Essentially, the company exists to empower lab professionals with technology that enhances diagnostic quality and efficiency. However, this mission is not formally articulated beyond marketing slogans.
- **Core Values (Current):** The company culture values **Quality** and **Accuracy** (ensuring the software’s results are precise), **Integrity** (ethical handling of patient data, regulatory compliance), and **Partnership/Trust** (long-term collaboration with healthcare clients, being a “trusted partner” to labs). These values are reflected in the case (e.g., customer feedback praising reliability and compliance, leadership emphasizing trust and structured approach). What’s less present in the current values are things like innovation or agility – suggesting a conservative culture.
- **Vision (Current):** Lumora does not have a clearly stated ambitious vision in the case. Implicitly, its vision so far might be described as “to be a leading diagnostics software provider in the DACH region’s lab market.” The case indicates they have focused on maintaining a leading position in Germany and Austria and considered expanding to Switzerland and adjacent segments, but there’s no mention of a bold future state vision (for example, nothing about transforming diagnostics globally or leveraging AI yet). The current “vision” is thus limited and internally focused, which has likely contributed to their plateaued growth.

Step 2: Gaps and Misalignments in Current Ambition

Sample Answer Highlights:

- The **Purpose** as currently understood is somewhat generic and **lacks inspiration** – “improving patient outcomes through better diagnostics” is noble but not distinctive to Lumora. It doesn’t galvanize the organization beyond the everyday business. There’s a gap in that the purpose hasn’t been updated to reflect new technologies or broader impact (e.g., it doesn’t mention innovation or adapting to the future).
- The **Values** that dominate (quality, integrity, partnership) have served Lumora well in building trust, but there is a **misalignment with future needs**: to thrive in a rapidly changing digital health environment, values like **innovation, agility, or customer-centricity** need more emphasis. Currently, the company’s cautious, quality-first culture, while a strength, may also slow it down (“We are trusted but not seen as cutting-edge”). This is a potential cultural misalignment as the industry shifts toward fast innovation cycles.
- The **Vision** gap is most glaring – there is **no clear, shared vision** of what “winning” looks like in 5–10 years and beyond. Lumora’s team lacks a unifying long-term goal or inspiring picture of the future. This can lead to strategic drift or internal confusion (the CEO even notes they haven’t defined what winning means). The absence of a bold vision means the company might be too reactive. Additionally, any implicit vision (“be the regional leader”) is **not sufficiently ambitious or future-proof** given global tech trends; it might also be internally focused (market share) rather than externally (impact on healthcare).
- **Summary**: Lumora’s Winning Ambition elements are not well-defined or aligned: a somewhat static purpose, a set of values not fully geared for innovation, and no vivid vision. This chasm likely contributes to their strategic stagnation. The next step clearly is to redefine these elements to provide direction and energy for the company’s transformation.

Step 3: New Core Purpose and Values (Next 5-Year Horizon)

Sample Core Purpose (Mission) Proposal:

“To revolutionize diagnostic decision-making so every patient gets the right diagnosis faster.” – This mission statement is concise and aspirational. It signals **why** Lumora exists: to fundamentally improve how diagnoses are done (revolutionize decision-making) in order to benefit patients (right diagnosis faster). It suggests innovation (doing things in new ways) and keeps patient impact at the center, going beyond just serving labs to the end purpose of the work. It’s still aligned with Lumora’s heritage of diagnostics, but ups the ambition to a transformative level.

Rationale: This revised purpose directly addresses the future scenario (need for faster, AI-assisted diagnostics) and is motivational for employees (connects their work to patient outcomes). It also differentiates Lumora from simply “providing software” – it’s about leading change in diagnostics.

Sample Core Values Proposal: (with brief explanation of each) 1. **Patient Impact First** – We ultimately measure our success by how much we improve patient care and outcomes. *(Keeps the organization focused on end benefit of their products, aligning with healthcare’s patient-centric trend.)*

2. **Innovation & Learning** – We encourage curiosity, embrace new technologies (like AI), and continuously learn to stay ahead in diagnostic solutions. *(Addresses the need for more innovation and adaptability in Lumora’s culture.)*

3. **Quality & Integrity** – We never compromise on the accuracy of our solutions and uphold the highest ethical standards in data and compliance. *(Preserves Lumora’s strength in quality and trust – a nonnegotiable in healthcare.)*

4. **Collaboration** – We succeed through close partnership with healthcare providers and internal teamwork. We value diverse expertise and open communication. *(Builds on the partnership value, extending it to internal and external collaboration, which is key for integrating systems and working with partners in the ecosystem.)*

5. *(Optional)* **Agility** – We respond rapidly to change, staying flexible and resilient in how we operate and implement new ideas. *(This could be included to further counteract the old slow-moving culture; ensures everyone values speed in adapting.)*

Rationale: The above values mix the old and new: **Quality/Integrity** remains as a core part of Lumora’s identity – critical for client trust and regulatory needs – but new emphasis is placed on **Innovation, Patient-centric mindset, and Agility**, which are essential given the industry’s digital transformation. **Collaboration** underscores working with both clients and

technology partners (perhaps even regulators) in the new landscape. Together, these values aim to create a culture that can execute the new purpose and vision.

Step 4: Vision – BHAG and Vivid Description

Sample BHAG (Big Hairy Audacious Goal):

“By 2030, Lumora will power 50% of all diagnostic decisions in the DACH region through its AI-enhanced platform, helping to cut average diagnostic turnaround time by 40%.”

This BHAG has two elements: a **market impact goal** (powering 50% of diagnostic decisions in the region – meaning Lumora’s solutions are deeply embedded in labs/clinics, signifying market leadership and adoption) and an **outcome goal** (reducing turnaround time by 40%, which ties directly to patient impact and efficiency). It’s bold (dominant market position and significant performance improvement) and measurable. It implicitly requires Lumora to incorporate AI (as stated) and to expand usage to many clinics and labs.

Sample Vivid Description: *(Painted as a short narrative of the future state)*

“It’s 2030 (but it could very well be later, as the vision is not necessarily time-bound), and Lumora HealthTech is recognized across Europe as the driving force behind a new era of diagnostics. In hospital labs and private clinics alike, clinicians rely on the Lumora Nexus platform – an AI-enhanced diagnostics cloud – as an indispensable ‘second brain’ for every complex case. A lab technologist in Munich can instantly pull up Lumora’s analysis, which not only flags critical results but also integrates the patient’s history from the EHR, suggesting personalized next-step tests. Colleagues in Zurich and Vienna collaborate in real-time through Lumora’s network, benchmarking their findings against regional data trends. Lumora’s reputation in 2030 is that of a pioneer: known for innovative AI tools that are as trusted as a senior specialist. The platform’s recommendations are transparent and explainable, satisfying regulators and earning the confidence of medical staff. Patients indirectly feel the Lumora impact too – they get answers faster. What used to take days or weeks of uncertainty now takes hours, and treatment can begin that much sooner. Internally, Lumora’s teams are energized by a culture that celebrates learning and customer impact. The company has grown threefold, yet it’s agile: new features roll out seamlessly via the cloud to all clients, and each update further personalizes and improves diagnostic accuracy. At industry conferences, Lumora is cited as “the gold standard of diagnostic decision support,” having not only captured half of the DACH market but also begun making inroads globally through partnerships. In short, Lumora’s vision of revolutionizing diagnostics is a reality – it’s hard to imagine the diagnostic process without Lumora’s AI-assisted engine at its core.”

Why this is effective: This vivid description touches on multiple facets that align with the scenario: **Technology & AI:** Mentions an AI-enhanced platform integral to diagnostics (reflecting digital transformation and AI trends). - **Integration:** Highlights interoperability with EHRs and collaboration across borders (tying to digital integration and data sharing expectations). - **Reputation & Trust:** Emphasizes that Lumora is known as a pioneer but also trusted (addressing the importance of trust and regulatory compliance in adopting AI). - **Patient Outcome:** Notes faster answers for patients (patient-centric care improvement). - **Internal Culture:** Even alludes to the cultural transformation (teams celebrating learning and impact, agility at scale). - **Scale and Market Position:** Clearly states a leadership position (half the market, starting global expansion) which matches the BHAG’s quantitative target.

A student’s description may be shorter, but it should similarly capture the **essence of the envisioned future** in a concrete way. We’re looking for elements of creativity grounded in the case’s reality.

Step 5: Level of Ambition – Quantitative Targets

Sample Targets Table: *(Note: Baseline figures are assumed for illustration; students may use or skip baselines if not given in case.)*

Dimension	Metric (5-Year Target)	Baseline (2025)	Target (2030)
Financial	Annual Revenue	~€70 million (est.)	€150 million (more than 2x growth)
	EBITDA Margin	15%	25% (through scaling and efficiency)
	DACH Market Share (Labs & Clinics using Lumora)	~20% of decisions	50% of all diagnostic decisions (as per BHAG)
Customer	Number of healthcare institutions served	120 (labs in 2 countries)	300+ across DACH (including labs and clinics)
	Customer Satisfaction (NPS)	NPS = 30	NPS 60 (world-class, through superior value)
	Customer Retention Rate	88%	95% (very high loyalty)
Internal Process	New Product Introduction cycle	1 major update/year	Quarterly agile releases (continuous improvements)
	AI Integration Level	Minimal AI features now	AI in 100% of modules (AI-driven suggestions present in all key workflows)
	Compliance/Quality (e.g., error rate or audit pass rate)	98% audit pass	100% compliance audit success; zero critical errors reported
Learning & Growth	R&D Investment as % of Revenue	8%	15% (significantly increased focus on innovation)
	Employee Engagement (survey score)	70/100	85+/100 (foster a purpose-driven, innovative culture)
Dimension	Metric (5-Year Target)	Baseline (2025)	Target (2030)
	Talent & Skills	– (qualitative)	Build an in-house AI innovation team of 20 specialists; All staff complete annual AI ethics training (<i>example qualitative goals</i>)

Explanation: These targets align with the vision and purpose: - Financially, doubling revenue and increasing market share to 50% reflect the BHAG's market leadership aim. Improved margin indicates efficient scaling. - Customer metrics focus on expansion (number of clients), deepening relationships (retention), and satisfaction – if Lumora truly provides superior, needed solutions (faster, integrated diagnostics), NPS should rise significantly. - Internal Process metrics address

innovation and quality: releasing updates faster (agile development) to stay cutting-edge, fully embedding AI into the product (key to staying relevant), and maintaining impeccable quality/compliance despite rapid growth (since trust is a core value). - Learning & Growth targets ensure the foundation for all above: higher R&D to fuel innovation, high employee engagement (people are motivated by the new Winning Ambition), and acquiring new skills/talent (especially in AI and data science, given the strategy). The qualitative examples show commitment to capability building (students may give different ones, like partnerships or patents).

A strong answer will have *at least one metric per category*, with concrete numbers that make sense together. The numbers should be ambitious (e.g. aiming for significant growth), but students should avoid being delusional (like “1000% growth” with no basis). If a student just lists broad goals without specificity, that would be weaker; the best answers quantify the ambition as asked.

Step 6: Coherence and Alignment Justification

Sample Answer Highlights:

- **Internal Coherence:** The student should tie it all together. In our sample, we’d note: *“Our Core Purpose of revolutionizing diagnostic decision-making keeps everyone focused on why we’re pursuing these changes – to benefit patients with faster, better diagnoses. The Core Values we chose (e.g. Innovation, Quality, Collaboration, etc.) create a culture that can achieve that Purpose – we’ll remain true to our trusted quality while becoming more innovative and agile, which is necessary to reach our vision. The Vision we outlined (Lumora as the AI-driven diagnostics leader by 2030, cutting turnaround times dramatically) directly builds on that Purpose – it’s the tangible future we want, and living our Values will get us there. Finally, the Level of Ambition metrics put concrete milestones on that vision: for example, the financial and customer targets (€150M revenue, 300+ institutions, 50% market share) show what ‘revolutionizing diagnostics’ means in market impact, while internal targets (quarterly releases, AI in all workflows) show how we’ll operate to make it happen, all supported by investing in our people and innovation (15% R&D, high engagement).”* In short, each element supports the others. There are no contradictions (e.g., we didn’t say quality is a value and then set a target that sacrifices quality for speed – we balanced both).
- **Alignment with Foresight Scenario:** A top answer explicitly references how the ambition positions Lumora for the future environment. For instance: *“Our Winning Ambition is tailored to the industry shifts: We embrace AI (as seen in our vision of an AI platform and the AI integration target) addressing the AI-driven diagnostics trend. We emphasize integration and collaboration (value of Collaboration, vision mentioning EHR integration) which aligns with the digital transformation imperative. By keeping Quality/Integrity and aiming for 100% compliance, we’re ready for stricter regulations – turning compliance into a strength. ‘Patient Impact First’ as a value and the goal to cut diagnosis time by 40% directly respond to the patient-centric care trend, showing we define winning partly by patient outcomes. And our focus on innovation and growth will help us fend off new entrants – we won’t be complacent regional players, but aiming to set the pace in this space.”* This kind of explanation shows the student considered the scenario when crafting the ambition, ensuring Lumora’s strategy is proactive about the future rather than stuck in the past.
- **Overall,** the student’s Winning Ambition should read as a **unified story**: Lumora’s mission gives a reason to exist, the values define **how** they will work while staying true to that mission, the vision paints **what** it looks like in 5 years if they succeed, and the metrics make that vision concrete and trackable. Everything points toward enabling Lumora to thrive in the anticipated industry context. If a piece of the student’s answer doesn’t fit (for example, a value that doesn’t connect to any part of the vision, or a metric that seems random), that would be a coherence issue. Excellent answers will avoid those issues, and the instructor should highlight how well (or not) the pieces interlock.

Common Pitfalls to Watch For:

- Some students might provide very generic missions or visions (e.g. “To be the best diagnostics company” without specifics). Encourage specificity and distinctiveness tied to the case (what does “best” mean? best at what, for whom?).
- Others might set extremely *unrealistic* targets (e.g., “100% market share” or “expand from DACH to worldwide domination in 5 years” for a mid-sized company). Ambition should be high but believable given resources and context.
- Forgetting one of the four elements in Part 2 (occasionally someone might omit Level of Ambition metrics or not truly give a BHAG). The prompt is clear, so full answers should cover all.

- Lack of linkage to scenario: If a response doesn't mention anything about AI or digital trends and just rehashes generic ideas, it misses an important aspect. We want to see that the foresight information was used.
- Incoherence: e.g., saying one of the company's core values is "cost-efficiency" but then proposing a differentiation high-value strategy in the vision, or a purpose about broad access to diagnostics but then only focusing on high-end hospital clients in metrics. Ensure consistency in narrative.

By using this guide, you can evaluate whether students have not only understood the **Winning Ambition** concepts (Purpose, Values, Vision, Level of Ambition) but also applied them thoughtfully to the Lumora case. High-scoring assignments will present a well-reasoned, well-aligned ambition that feels both aspirational and grounded in the case's reality. Use the rubric to assign points for each section, and provide qualitative feedback highlighting strengths (e.g., "Great job aligning your vision with the AI trend!") and areas to improve (e.g., "Mission statement could be more specific to Lumora's unique role").
